**To whom it may concern**

**I write to confirm that Pope Plant recently completed a successful capping, restoration (c. 250,000sqm) and surface water works project at a Landfill in Surrey.**

**The site was a former sand quarry and is situated on the side of a valley. There were third party interests associated with the site including an adjacent land owner and a contracted gas extraction company, this together with other operational requirements including drilling new wells provided for a very active and busy site. A particular difficulty at the site was the construction of a surface water drainage system that had to marry into the consented capping and restoration works and the boundary conditions.**

**There were various revisions to the works programme and Pope Plant were at the heart of all the liaison and they contributed considerably to the project that came in on time and within budget.**

**The success of the project was mainly down to the way Craig Pope and his colleagues understood the client's needs, worked with an excellent spirit of collaboration and interfaced with all the parties to complete the project.**

**I would recommend others to seriously consider the services of Pope Plant**

A handwritten signature in black ink that reads 'E.J. Farr'.
